

# July & August Scavenger Hunt

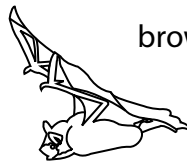

- Eagle** and **osprey** young leave the nest this time of year. Look for them near bodies of water.
- Young deer, or **fawns**, are gathering the courage to romp further afield.
- Bats** are especially active in August. Starting at dusk they can be seen searching for insect dinners.
- Long-legged **shore birds**, like sandpipers and yellow legs, can be found in shallow water looking for food.
- The **marsh mallow** blooms in August. Look for the pink and white flowers in swamp areas.
